2022-01-18 This book offers a critical appreciation of the nature and impact of coercive control in interpersonal relationships. It examines what this concept means, who is impacted by the behaviours it captures, and how academics, policymakers, and policy advocates have responded to the increasing recognition of the deleterious effects that coercive control has on especially women's lives. The book discusses the historical emergence of this concept, who its main proponents have been, and how its effects have been understood. It considers the role of coercive control in making sense of women's pathway into crime as well as

their experiences of it as victims. Coercive control has been presented predominantly as a gendered process, and consideration is given in this book to the efficacy of this assumption as well as the extent to which the concept makes sense for a wide constituency of marginalized women. In recent years, much energy has been given to efforts to criminalize coercive control, and the concerns that these efforts generate are discussed in detail, alongside what the limitations to such initiatives might be. In conclusion, the book situates the rising pre-occupation with coercive control within the broader concerns with policy transfer, ways of taking account of victim-survivor voices, alongside the importance of working towards more holistic policy responses to violence(s) against women. The book will be of particular interest to academics, policymakers, and practitioners working in criminal justice who wish to understand both the nature and extent of coercive control and the importance of appreciating the role of nuance in translating that understanding into practice. This book offers a critical appreciation of the nature and impact of coercive control in interpersonal relationships

In this breakthrough guide to understanding, treating, and healing Attention Deficit Disorder, Dr. Gabor Maté, bestselling author of *The Myth of Normal*, and himself diagnosed with ADD: Demonstrates that the condition is not a genetic “illness” but a response to environmental stress Explains that in ADD, circuits in the brain whose job is emotional self-regulation and attention control fail to develop in infancy – and why Shows how ‘distractibility’ is the psychological product of life experience Allows parents to understand what makes their ADD children tick, and adults with ADD to gain insights into their emotions and behaviors Expresses optimism about neurological development even in adulthood Presents a program of how to promote this development in both children and adults Whereas other books on the subject describe the condition as inherited, Dr. Maté believes that our social and emotional environments play a key role in

both the cause of and cure for this condition. In *Scattered Minds*, he describes the painful realities of ADD and its effect on children as well as on career and social paths in adults. While acknowledging that genetics may indeed play a part in predisposing a person toward ADD, Dr. Maté moves beyond that to focus on the things we can control: changes in environment, family dynamics, and parenting choices. He draws heavily on his own experience with the disorder, as both an ADD sufferer and the parent of diagnosed children. Providing a thorough overview of ADD and its treatments, without blaming anyone, *Scattered Minds* is essential and life-changing reading for the millions of ADD sufferers in North America today. 2012-07-17 This report presents findings from the National Violence Against Women (NVAW) Survey on the extent, nature, and consequences of intimate partner violence in the United States. The National Institute of Justice and the Centers for Disease Control and Prevention cosponsored the survey through a grant to the Center for Policy Research. The survey consists of telephone interviews with a nationally representative sample of 8,000 U.S. women and 8,000 U.S. men about their experiences as victims of various forms of violence, including intimate partner violence. The survey compares intimate partner victimization rates among women and men, specific racial groups, Hispanics and non-Hispanics, and same-sex and opposite-sex cohabitants. It also examines risk factors associated with intimate partner violence, the rate of injury among rape and physical assault victims, injured victims' use of medical services, and victims' involvement with the justice system. Research on intimate partner violence has increased dramatically over the past 20 years. While greatly enhancing public awareness and understanding of this serious social problem, this research has also created much controversy and confusion. Findings of intimate partner victimization vary widely from study to study. Some

studies conclude that women and men are equally likely to be victimized by their partners, but others conclude that women are more likely to be victimized. Some studies conclude that minorities and whites suffer equal rates of intimate partner violence, and others conclude that minorities suffer higher rates. In addition, there are many gaps in the scientific literature on intimate partner violence, such as the level of violence committed against men and women by same-sex intimates. Little empirical data exist on the relationship between different forms of intimate partner violence, such as emotional abuse and physical assault. Finally, little is known of the consequences of intimate partner violence, including rate of injury and victims' use of medical and justice system services. This Research Report addresses these and other issues related to intimate partner violence. The information presented in this report is based on findings from the National Violence Against Women (NVAW) Survey, a national telephone survey jointly sponsored by the National Institute of Justice (NIJ) and the Centers for Disease Control and Prevention (CDC). The survey, which was conducted from November 1995 to May 1996, consists of telephone interviews with a representative sample of 8,000 U.S. women and 8,000 U.S. men. Survey respondents were queried about their experiences as victims of various forms of violence, including rape, physical assault, and stalking by intimate partners. Victimized respondents were asked detailed

questions about the characteristics and consequences of their victimization, including the extent and nature of any injuries they sustained, their use of medical services, and their involvement with the justice system. This Research Report also summarizes the survey's findings on victimization rates among women and men, specific racial groups, Hispanics and non-Hispanics, and opposite-sex and same-sex cohabitants. It examines risk factors associated with intimate partner violence, rates of injury among rape and physical assault victims, injured victims' use of medical services, and victims' involvement with the justice system. Although this report focuses on women's and men's experiences as victims of intimate partner violence, complete details about men's and women's experiences as victims of rape, physical assault, and stalking by all types of assailants are contained in earlier NIJ and CDC reports. Because of the sensitive nature of the survey, state-of-the-art techniques were used to protect the confidentiality of the information being sought and to minimize the potential for retraumatizing victims of violence and jeopardizing the safety of respondents. This report presents findings from the National Violence Against Women NVAW Survey on the extent nature and consequences of intimate partner violence in the United States

1999-06-10 What are the roots of violence between spouses? What do we

know about the precursors of wife battering? Who are the victims of domestic abuse? This book discusses causes and precursors of violence, exploring the psychological characteristics of perpetrators of violence, and describing and evaluating potential responses to it. Each chapter contributes to the reader's understanding of violence in intimate relationships. Part I establishes the what and the who of violence; Part II examines the interpersonal and situational context that may contribute to violent interaction, or the how and why that underlie violent interactions; and Part III provides an account of what happens to victims as a result of physical and psychological abuse and how relationships change following violent interactions. The book provides an up-to-date supplemental textbook for courses on a variety of disciplines that deal with violence between spouses and intimate spouses. CONTRIBUTORS: S. Oskamp, X. B. Arriaga, M. Here are just some of the key principles covered: Interventions Should Be Based on a Thorough Unbiased Assessment Victim/Perpetrator Distinctions are Overstated, and Much Partner Abuse is Mutual Regardless of Perpetrator Gender, Child Witnesses to Partner Abuse are Adversely Affected, and are at Risk for Perpetrating Partner Abuse as Adults This new gender-inclusive approach to assessment and intervention provides a significant departure from traditional paradigms of domestic violence, and offers a much-needed awareness to effectively prevent violence in our communities today

and for future generations. In this exciting new book John Hamel author of the ground breaking Gender Inclusive Treatment of Intimate Partner Abuse and Tonia Nicholls go beyond the traditional intervention theories of domestic violence practiced today

2013-01-11 This book provides a lucid and highly acclaimed introduction to gender issues in crime and criminal justice, central to any understanding of crime and criminal justice policy and practice. This second edition has been updated to take full account of recent developments, particularly in the areas of policing, crime prevention, restorative justice and legislation relating to sexual offences and the nature and impact of crime on women – in particular the Sexual Offences Act 2003. Gender, Crime and Criminal Justice is divided into three main sections. The first considers different ways of theorising about gender and the relative impact of this on thinking about crime and criminal victimisation; the second considers some of the evidence in relation to people's gendered experiences of crime and criminal victimisation; the third considers how those working within the criminal justice system, and the policies that are put in place, work to sustain or change those experiences of crime and criminal victimisation in relation to gender. This book provides a lucid and highly acclaimed introduction to gender issues in crime and criminal justice central to any understanding of crime and criminal justice policy and practice

2002-01-01 This work challenges one of Western culture's most deeply-held assumptions: that violence against women is different from violence against men. Richard Felson argues that this type of violence is rarely the result of sexism or hatred against women and that sexism may actually inhibit violence against women. He cites research suggesting that the motives for violence against women are similar to the motives for violence against men: to control, to gain retribution, and to promote or defend self-image. These motives play a role in almost all violence, regardless of gender. Using a comparative method to determine how violence against women differs from violence against men, Felson illustrates not only that violence against women is less frequent than violence against men but also that our culture and legal system treat it more harshly. Contrary to the claims that the courts blame the victim in cases of violence against women, the author shows that the tradition of protection of women sometimes produces the opposite effect, and that it is due process and not sexism that makes, for instance, rape cases seem biased against women. Annotation In this elegantly argued and well researched book author Richard B Felson argues that violence against women is rarely the result of sexism or hatred against women and that sexism may actually inhibit violence against women

2013 Newsweek called Dayton's the 'swingingest spot in Minneapolis,' and almost

anyone living in the Twin Cities during the twentieth century has an anecdote to prove it. At Dayton's, you could buy a cashmere sweater for a song during an Anniversary Sale or commission a Persian silk dress for a society wedding. You could attend an eighth-floor extravaganza like Santabear's First Christmas or catch the occasional circus. Dayton's was the job that put many Minnesotans through college or the career that took them to retirement. From its early days as an innovative dry goods store to a trend-setting company that grew into the retail giant Target, Kristal Leebrick chronicles ten decades in the life of a Minnesota enterprise that defined style, good service and philanthropy.--Page 4 of cover Newsweek called Daytons the swingingest spot in Minneapolis and almost anyone living in the Twin Cities during the twentieth century has an anecdote to prove it

2012-07-19 Research on violence against women has exploded in the past 20 years, particularly in the areas of intimate partner violence and sexual assault. Despite this outpouring of research, many gaps exist in our understanding of violence against women. For instance, reliable information on minority women's experiences with violence is still lacking. Few empirical data exist on the relationship between different forms of violence against women, such as victimization in childhood and subsequent victimization. Finally, empirical data on the consequences of violence against women,

including their injury rates and use of medical services, are lacking. To further understanding of violence against women, the National Institute of Justice and the Centers for Disease Control and Prevention jointly sponsored, through a grant to the Center for Policy Research, a national survey that was conducted from November 1995 to May 1996. The National Violence Against Women (NVAW) Survey sampled both women and men and thus provides comparable data on women's and men's experiences with violent victimization. Respondents to the survey were asked about: Physical assault they experienced as children by adult caretakers; Physical assault they experienced as adults by any type of assailant; Forcible rape and stalking they experienced at any time in their life by any type of perpetrator. Respondents who disclosed that they had been victimized were asked detailed questions about the characteristics and consequences of their victimization, including injuries they sustained and their use of medical services. This NIJ Research Report presents findings from the NVAW Survey on the prevalence and incidence of rape, physical assault, and stalking; the rate of injury among rape and physical assault victims; and injured victims' use of medical services. The data show that violence is more widespread and injurious to women's and men's health than previously thought—an important finding for legislators, policymakers, intervention planners, and researchers as well as the public health and

criminal justice communities. Despite this outpouring of research many gaps exist in our understanding of violence against women For instance reliable information on minority womens experiences with violence is still lacking

Accountability and safety to battered women and creating a process of change for abusive men are central to its success. --Susan Schechter, author of Women and Male Violence Drawing upon years of experience...Pence and Paymar have written a practical and conceptually sound curriculum for batterers' groups. This book offers an effective guide to both the beginning facilitator and the experienced clinician for engaging batterers in the lifelong process of changing their intimate relationships, from those based on coercive control to those based on equality. [They] accomplish this task without compromising their commitment to advocacy with battered women. --Anne L. 2017-09-04 The informative and controversial findings in this book are based on two path-breaking national surveys of American families. Both show that while the family may be the central locus of love and support, it is also the locus of risk for those who are physically assaulted. The book provides a wealth of information on gender differences and similarities in violence, and on the effects of gender roles and inequality. Two landmark American studies of violence from the National Family Violence survey form the basis of this book. Both show that while the family may be the central locus of love and support, it is also the locus of risk for those who are being physically assaulted. This is particularly true for women and children, who are statistically more at risk of assault in their own homes than on the streets of any American city. Physical Violence in American Families provides a wealth of information on gender differences and similarities in violence, and on the effects of gender roles and inequality. It is

essential for anyone doing empirical research or clinical assessment. The informative and controversial findings in this book are based on two path breaking national surveys of American families

2011-01-01 Rethinking Domestic Violence is the third in a series of books by Donald Dutton critically reviewing research in the area of intimate partner violence (IPV). The research crosses disciplinary lines, including social and clinical psychology, sociology, psychiatry, affective neuropsychology, criminology, and criminal justice research. Since the area of IPV is so heavily politicized, Dutton tries to steer through conflicting claims by assessing the best research methodology. As a result, he comes to some very new conclusions. These conclusions include the finding that IPV is better predicted by psychological rather than social-structural factors, particularly in cultures where there is relative gender equality. Dutton argues that personality disorders in either gender account for better data on IPV. His findings also contradict earlier views among researchers and policy makers that IPV is essentially perpetrated by males in all societies. Numerous studies are reviewed in arriving at these conclusions, many of which employ new and superior methodologies than were available previously. After twenty years of viewing IPV as generated by gender and focusing on a punitive law and order approach, Dutton

argues that this approach must be more varied and flexible. Treatment providers, criminal justice system personnel, lawyers, and researchers have indicated the need for a new view of the problem -- one less invested in gender politics and more open to collaborative views and interdisciplinary insights. Dutton's rethinking of the fundamentals of IPV is essential reading for psychologists, policy makers, and those dealing with the sociology of social science, the relationship of psychology to law, and explanations of adverse behaviour.
