2009-04-30 Ab initio molecular dynamics revolutionized the field of realistic computer simulation of complex molecular systems and processes, including chemical reactions, by unifying molecular dynamics and electronic structure theory. This book

provides the first coherent presentation of this rapidly growing field, covering a vast range of methods and their applications, from basic theory to advanced methods. This fascinating text for graduate students and researchers contains systematic derivations of various ab initio molecular dynamics techniques to enable readers to understand and assess the merits and drawbacks of commonly used methods. It also discusses the special features of the widely used Car-Parrinello approach, correcting various misconceptions currently found in research literature. The book contains pseudo-code and program layout for typical plane wave electronic structure codes, allowing newcomers to the field to understand

commonly used program packages and enabling developers to improve and add new features in their code. 1997-02-28 Containing maps showing the distribution of emissions from atomic hydrogen, this is an important reference source for astronomers in many different fields of research. Atomic hydrogen, the principal component of the interstellar medium, was measured over a 5-year period using the 25-meter radio telescope of the NFRA. Displayed in several projections, each map corresponds to a particular velocity interval. A CD-ROM also accompanies the Atlas, and contains the entire dataset of the Leiden/Dwingeloo survey, color images in GIF format, and animations displaying the 3-dimensional data cube. 2010-10-13 The book gives a comprehensive review of the most advanced multiscale methods for protein structure prediction, computational studies of protein

dynamics, folding mechanisms and macromolecular interactions. It approaches span a wide range of the levels of coarse-grained representations, various sampling techniques and variety of applications to biomedical and biophysical problems. This book is intended to be used as a reference book for those who are just beginning their adventure with biomacromolecular modeling but also as a valuable source of detailed information for those who are already experts in the field of biomacromolecular modeling and in related areas of computational biology or biophysics. At the same time the number of experimentally solved protein structures is much smaller ca 60 000 This is because of the large cost of structure determination

1997-10-09 World-renowned futurist Hazel Henderson extends her twenty-five years of work in economics to examine the havoc the current economic system is creating at the global level. *Building a Win-Win World* examines how jobs, education, health care, human rights, democratic participation, socially responsible business, and environmental protection are all sacrificed to global competitiveness and outlines a new economic architecture based on positive, sustainable systems. *Building a Win Win World* examines how jobs education health care human rights democratic participation socially responsible business and environmental protection are all sacrificed to global competitiveness and outlines a new

2017-09-08 *Business as an Instrument for Societal Change: In Conversation with the Dalai Lama* is the result of two decades of research and dialogue with His Holiness the Dalai Lama and other leaders in business, government, science and education. Author

Sander Tideman, a lawyer and banker who has maintained a friendship with the Dalai Lama over all these years, presents a practical framework and methodology to develop a new kind of leadership - one fit to repurpose the business world and tackle escalating social, economic and environmental needs. The Dalai Lama rarely speaks directly on the topics of business, leadership and economics. Yet in the dialogues recounted here, his wisdom - combined with key insights from business and public leaders - creates a unified shift towards a consciousness of interconnectedness, offering profound insights for practitioners and general readers alike. Tideman unites the scientific worldviews of physics, neuroscience and economics with the positive psychology of human relationships, and ancient spiritual wisdom, to formulate practical business leadership solutions. While recognizing the need for change in external structures and governance, Tideman highlights the importance of opening our minds, and connecting inner and outer spirituality. At the same time, he focuses on concrete practices for winning the hearts and minds of employees, customers, communities, and society at large, while addressing deep-rooted problems such as extreme social inequality and continued financial collapses. At the heart of this book lies the journey to discover our shared purpose. This ignites new sources of value creation for the organisation, customers and society, which

Tideman terms 'triple value'. We can achieve triple value by aligning societal and business needs, based on the fundamental reality of interconnection. Business as an Instrument for Societal Change: In Conversation with the Dalai Lama is a readable and intelligent exploration of how leaders can actually help to shape a sustainable global economy by embracing innate human and humane behaviour. It is also Tideman's fascinating personal journey, which brought him to question the underlying motivations and goals of business leadership and to seek a new paradigm for a more sustainable approach. Reflecting Tideman's sharp perceptions and infused with the Dalai Lama's unmistakable joy, this book has the power to change your way of thinking. At the heart of this book lies the journey to discover our shared purpose. This ignites new sources of value creation for the organisation, customers and society which Tideman terms triple value

2022 With the sustainability emergency, businesses can no longer give priority to commercial interests (and financial gains) and close their eyes to societal and environmental interests. We need a new, higher perspective to close the gap. We need to formulate a new business logic and a sustainable value creation method for sustainable business, for their customers and society - that is, all business stakeholders, as well as the planet. This book will do just that. This book presents the insights gained from

action research with leading companies across the world to discover a comprehensive method that works: a practical framework for CEO and business leaders who want to lead their organization along the sustainability transition. Building on the latest insights from science, summarized as the systems view of life, the book presents the Triple Value mindset, a new sustainability leadership lens on how to create sustainable value from a systems viewpoint. This leadership model is unique as it enables business leaders to scale their intended impact from the organization to all stakeholders in the value chain, thus transcending the conflict between business and society. Not only that: it will also offer you a leadership journey - an adventure that will transform the way to think, feel and execute the new perspective in your company, while perfecting your leadership potential and inspiring the people you work with. On the journey you will be supported by models, tools and best practices, which will help you to reimagine your business strategy and your role as leader in driving sustainable transformation and success. We need to formulate a new business logic and a sustainable value creation method for sustainable business for their customers and society that is all business stakeholders as well as the planet This book will do just that

2018-01-02 This transdisciplinary volume puts forward proposals for wiser, socially just and sustainable socio-economic systems in

transition. There is growing support for the view that the end of capitalism is around the corner, but on which conceptual and ethical basis can we interpret these times? With investigations into feminist economics, post-growth environmentalism, socio-technical digital design, collaborative and commons economics, the editors create a dialogue between radical knowledge/practices and contemplative social sciences to transgress disciplinary boundaries and implement new visions of reality. This important book challenges our ways of thinking and outlines a pathway for new research. The first Conference on the Sustainable Development of Central Asia brought together government officials, development professionals, academics, activists and religious representatives from Central, South and East Asia and the West. The full range of perspectives from this diverse group is presented here on how Central Asia can find paths of development which really serve its long term interests, and what the rest of the world can learn from Central Asians about living in harmony with

the environment. This book is the result of a pioneering conference held in Ulaan Baatar in September 1994

2014-10-06 The Norwegian Continental Shelf (NCS), focus of this special publication, is a prolific hydrocarbon region and both exploration and production activity remains high to this day with a positive production outlook. A key element today and in the future is to couple technological developments to improving our understanding of specific geological situations. The theme of the publication reflects the immense efforts made by all industry operators and their academic partners on the NCS to understand in detail the structural setting, sedimentology and stratigraphy of the hydrocarbon bearing units and their source and seal. The papers cover a wide spectrum of depositional environments ranging from alluvial fans to deepwater fans, in almost every climate type from arid through humid to glacial, and in a variety of tectonic settings. Special attention is given to the integration of both analogue studies and process-based models with the insights gained from extensive subsurface datasets. 2013 Archosaurs, an important reptile group that includes today's crocodiles and birds, arose during the Triassic in the aftermath of the greatest mass extinction of all time. In the last 20 years, our understanding of the early evolution of the group has improved substantially with the discovery of new fossils and species of early archosaurs and their closest relatives, a better understanding of the relationships of these animals, and new insights into their palaeobiology. In order to synthesize these new data, researchers of early archosaurs from around the world met at the first symposium of early archosaur evolution at the IV Congreso Latinoamericano de Paleontología de Vertebrados (September 2011) in San Juan, Argentina. This symposium facilitated collaboration and strove to paint a better understanding of these extraordinary animals. The resultant body of work is a state-of-the-art examination of early archosaur groups and their close relatives including historical, anatomical, biogeographical, evolutionary and palaeobiological data. This contribution furthers our knowledge of the anatomy, relationships, and palaeobiology of species-level taxa as well as more global patterns of archosaur evolution during the Triassic -- P. 4 of cover. 2016-12-13 Contemplative Social Research brings together research and insights from scholars throughout Europe and North America, and from a variety of social science disciplines. The book argues that contemplative-based inquiry is unique in recognizing the deep oneness of humanity, since it requires embodied awareness as well as openness to the transpersonal dimensions of the human experience. No single discipline can deal with such vitally important issues as climate change, growing social inequalities, or the social impact of new digital technologies. Consequently, the book argues that only a contemplative vision that pushes the boundaries between disciplines and cultures can extend and broaden the social and human sciences. Part One focuses on conceptualizations of knowing and being. First, Zachary Walsh broadens mindfulness practice beyond various cultural, religious, and disciplinary perspectives. Valerie Bentz addresses the essentially contemplative nature of phenomenological inquiry, which is a way of being, as well as a way of knowing. Doug Porpora's critical realism reclaims the spiritual realm as necessary to ground moral and ethical action. Donald McCown recaps the benefits of mindfulness-based interventions (MBIs), structured as nonhierarchical groups of friends. Xavier Renteria-Uriarte views contemplation as the basis for all knowledge systems throughout human history. And Vincenzo Giorgino argues in favor of a balanced point of encounter between contemplative

knowledge and social sciences. Part Two presents applications of contemplative research and practice. Krzysztof Konecki maintains that consistent meditative practices enhance the ability of social scientists to see beyond the concepts and categories that may constrain their research. Annabelle Nelson shows that contemplative psychology, along with advancements in knowledge of the brain, allow for a fundamental transformation of the mind. Luann Fortune describes her experience using the somatic and meditative practice of labyrinth-walking as a tool for opening up her interpretation of data about her participants'

experiences. David Casacuberta demonstrates that the current software design for smartphones and computers-now pervasive ways of connecting-developed from a hierarchical and power-based mode of connectivity. And finally, Christopher Mare takes contemplative practice deeper into neuroscience and broader into environmental design. Consequently the book argues that only a contemplative vision that pushes the boundaries between disciplines and cultures can extend and broaden the social and human sciences Part One focuses on conceptualizations of knowing and being
