2018-02-20 A warm, gorgeous exploration of a little girl's experience immigrating to a new country and missing her home and her grandmother, who still lives far away. Sakura's dad gets a new job in America, so she and her parents make the move from their home in Japan. When she arrives in the States, most of all she misses her grandmother and the cherry blossom trees, under which she and her grandmother used to play and picnic. She wonders how she'll ever feel at home in this new place, with its unfamiliar language and landscape. One day, she meets her neighbor, a boy named Luke, and begins to feel a little more settled. When her grandmother becomes ill, though, her family takes a trip back to Japan. Sakura is sad when she returns to the States and once again reflects on all she misses. Luke does his best to cheer her up -- and tells her about a surprise he knows she'll love, but she'll have to wait till spring. In the meantime, Sakura and Luke's friendship blooms and finally, when spring comes, Luke takes her to see the cherry blossom trees flowering right there in her new neighborhood. 2014-09-12 The second edition of a comprehensive textbook that introduces turbomachinery and gas turbines through design methods and examples. This comprehensive textbook is unique in its design-focused approach to turbomachinery and gas turbines. It offers students and practicing engineers methods for configuring these machines to perform with the highest possible efficiency. Examples and problems are based on the actual design of turbomachinery and turbines. After an introductory chapter that outlines the goals of the book and provides definitions of terms and parts, the book offers a brief review of the basic principles of thermodynamics and efficiency definitions. The rest of the book is devoted to the analysis and design of real turbomachinery configurations and gas turbines, based on a consistent application of thermodynamic theory and a more empirical treatment of fluid dynamics that relies on the extensive use of design charts. Topics include turbine power cycles, diffusion and diffusers, the analysis and design of three-dimensional free-stream flow, and combustion systems and combustion calculations. The second edition updates every chapter, adding material on subjects that include flow correlations, energy transfer in turbomachines, and three-dimensional design. A solutions manual is

available for instructors. This new MIT Press edition makes a popular text available again, with corrections and some updates, to a wide audience of students, professors, and professionals.
