2010-07-15 The legacy of Alexander von Humboldt (1769–1859) looms large over the natural sciences. His 1799–1804 research expedition to Central and South America with botanist Aimé Bonpland set the course for the great scientific surveys of the nineteenth century, and inspired such essayists and artists as Emerson, Goethe, Thoreau, Poe, and Church. The chronicles of the expedition were published in Paris after Humboldt's return, and first among them was the 1807 "Essay on the Geography of Plants." Among the most cited writings in natural history,

after the works of Darwin and Wallace, this work appears here for the first time in a complete English-language translation. Covering far more than its title implies, it represents the first articulation of an integrative "science of the earth, " encompassing most of today's environmental sciences. Ecologist Stephen T. Jackson introduces the treatise and explains its enduring significance two centuries after its publication. 2015-11-27 The book provides a review of experimental methods and presents the worldwide newest literature regarding chemical substances fluxes via submarine groundwater discharge (SGD). Thus, the book characterizes both the distribution of chemicals in groundwater impacted areas in the Baltic Sea and their fluxes via SGD to the Baltic Sea. This book presents the state of art regarding the SGD and detailed studies on SGD characterization in the Baltic Sea. The Baltic Sea is an example of a region highly influenced by a variety of human activities that affect the ecosystem. It is shown that SGD has been proven to be one of the important sources introducing dissolved substances into the Baltic Sea. The loads of chemical substances delivered to the Baltic sea with SGD have not been quantified so far. 2005 Giambattista Tiepolo (1696-1770) was the greatest Italian painter of the eighteenth century, best known for his monumental frescoes and epic altarpieces. The scale of these paintings is immense,

even overpowering. Yet some of Tiepolo's finest work can be found in the small oil sketches that he often made in preparation for these grand commissions. Published to coincide with an exhibition at the J. Paul Getty Museum, Giambattista Tiepolo: Fifteen Oil Sketches brings together a group of the artist's oil sketches from the Courtauld Institute in London that spans his entire career and reveals the amazing confidence and fluidity with which he created these paintings. The unusual intimacy of these preparatory sketches-made directly on the canvas with no preliminary underdrawing-reveals a great artist's vigorous imagination at work. The exhibit will run from May 3, 2005, to September 4, 2005. An introductory essay situates these works within the context of eighteenth-century art and Tiepolo's life and career. 2018-12-07 First Published in 1994. In nearly all racially and ethnically heterogeneous societies, there is overt national conflict among parties and social movements organized on the basis of race and ethnicity. Such conflict has been much less evident in Latin America. Scholars have pondered the nature of race and ethnicity with regard to both Afro- American and Indo- American societies, though research on Brazil has been particularly prominent.

Special attention has been given to the relationship between social class and race and ethnicity. First Published in 1994

2018-10-01 This book aims at providing a brief but broad overview of biosignatures. The topics addressed range from prebiotic signatures in extraterrestrial materials to the signatures characterising extant life as well as fossilised life, biosignatures related to space, and space flight instrumentation to detect biosignatures either in situ or from orbit. The book ends with philosophical reflections on the implications of life elsewhere. In the 15 chapters written by an interdisciplinary team of experts, it provides both detailed explanations on the nature of biosignatures as well as useful case studies showing how they are used and identified in ancient rocks, for example. One case study addresses the controversial finding of traces of fossil life in a meteorite from Mars. The book will be of interest not only to astrobiologists but also to terrestrial paleontologists as well as any reader interested in the prospects of finding a second example of life on another planet. 2018-11-13 The significantly expanded and updated new edition of a widely used

text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final

chapter discusses the future societal impacts of reinforcement learning. This second edition has been significantly expanded and updated presenting new topics and updating coverage of other topics

2018-02-12 In Spanish Books in the Europe of the Enlightenment (Paris and London) Nicolás Bas examines the image of Spain in eighteenth-century Europe, and in Paris and London in particular. His material has been scoured from an exhaustive interrogation of the records of the book trade. He refers to booksellers' catalogues, private collections, auctions, and other sources of information in order to reconstruct the country's cultural image. Rarely have these sources been searched for Spanish books, and never have they been as exhaustively exploited as they are in Bas' book. Both England and France were conversant with some very negative ideas about Spain. The Black Legend, dating back to the sixteenth century, condemned Spain as repressive and priest-ridden. Bas shows however, that an alternative, more sympathetic, vision ran parallel with these negative views. His bibliographical approach brings to light the Spanish books that were bought, sold and ultimately read. The impression thus obtained is likely to help us understand not only Spain's past, but also something of its present. His material has been scoured from an exhaustive interrogation of the records of the book trade

2019-12-31 The classic book that restored the voices of ordinary people to our understanding of the French Revolution The Coming of the French Revolution remains essential reading for anyone interested in the origins of this great turning point in the formation of the modern world. First published in 1939 on the eve of the Second World War and suppressed by the Vichy government, this classic work explains what happened in France in 1789, the first year of the French Revolution. Georges Lefebvre wrote history "from below"—a Marxist approach—and in this book he places the peasantry at the center of his analysis, emphasizing the class struggles in France and the significant role they played in the coming of the revolution. Eloquently translated by the historian R. R. Palmer and featuring an introduction by Timothy Tackett that provides a concise intellectual biography of Lefebvre and a critical appraisal of the book, this Princeton Classics edition offers perennial insights into democracy, dictatorship, and insurrection. 2003 Here approximately two hundred works by French and Spanish artists chart the development of this cultural influence and map a fascinating shift in the paradigm

of painting, from Idealism to Realism, from Italy to Spain, from Renaissance to Baroque. Above all, these images demonstrate how direct contact with Spanish painting fired the imagination of nineteenth-century French artists and brought about the triumph of Realism in the 1860s, and with it a foundation for modern art.--BOOK JACKET. 1787 3 vols London 1791 Trapier 1925 Elizabeth du Gu Trapier El Greco New York 1925 Trapier 1929 cuadros Seville 1864 Tulard 1987 Jean Tulard ed Dictionnaire Napol on Paris 1987 Twiss 1775
