2017-06-30 The Richard Perkins warship identification albums form one of the most detailed studies ever undertaken of the

changes to the appearance of Royal Navy ships. However, it is a unique hand-drawn manuscript artefact in the care of the National Maritime Museum, so despite its value it is rarely seen by anyone besides the museum's curators, for whom it is a precious resource, used on an almost daily basis. In collaboration with the Museum, Seaforth is undertaking the first publication of this monumental work in a superbly produced multi-volume edition that captures all the qualities of the original. Every page is reproduced at full size, making the extensive hand-written annotation readable, while the fine-line drawings retain all the colours that Perkins used to denote appearance differences and alterations. Following the Museum's binding arrangement, the fourth volume of the series completes the coverage of all cruiser-type ships down to the Belfast class of 1939 begun in Volume III. This second part includes most of the smaller cruisers from about 1916 back to the Amazon class corvettes of 1865. This is a publishing event of the utmost importance for every enthusiast and ship modeller, who for the first time will be able to own a copy of a unique and invaluable reference work. 2012-12-06 This tenth volume in the series addresses an important topic of research, design, and policy in the environment and behavior field. Public places and spaces include a sweeping array of settings, including urban streets, plazas and squares, malls, parks, and other locales, and natural settings such as aquatic environments, national parks and forests, and wilderness areas. The importance of public settings is highlighted by difficult questions of access, control, and management; unique needs and problems of different users (including women, the handicapped, and various ethnic groups); and the dramatic re-shaping of our public environments that has occurred and will continue to occur in the foreseeable future. The wide-ranging scope of the topic of public places and spaces demands the attention of many disciplines and researchers, designers, managers, and policymakers. As in previous volumes in the series, the authors in the present volume come from a variety of disciplinary backgrounds, research and

design orientations, and affiliations. They have backgrounds in or are affiliated with such fields as architecture, geography, landscape architecture, natural resources, psychology, sociology, and urban design. Many more disciplines obviously contribute to our understanding and design of public places and spaces, so that the contributors to this volume reflect only a sample of the possibilities and present state of knowledge about public settings.
