2008-04-10 One of the major neuropsychological models of personality, developed by world-renowned psychologist Professor Jeffrey Gray, is based upon individual differences in reactions to punishing and rewarding stimuli. This biological theory of personality - now widely known as 'Reinforcement Sensitivity Theory' (RST) - has had a major influence on motivation, emotion and psychopathology research. In 2000, RST was substantially revised by Jeffrey Gray, together with Neil McNaughton, and this revised theory proposed three principal motivation/emotion systems: the 'Fight-Flight-Freeze System' (FFFS), the 'Behavioural Approach System' (BAS) and the 'Behavioural Inhibition System' (BIS). This is the first book to summarise the Reinforcement Sensitivity Theory of personality and bring together leading researchers in the field. It summarizes all of the pre-2000 RST research findings, explains and elaborates the implications of the 2000 theory for personality psychology and lays out the future research agenda for RST. 2011-02-07 In the Critique of Hegel's Philosophy of Right," the young Marx elliptically alludes to a true democracy whose advent would go hand in hand with

the disappearance of the state. Miguel Abensour's rigorous interpretation of this seminal text reveals an "unknown Marx" who undermines the identification of democracy with the state and defends a historically occluded form of politics. True democracy does not entail the political and economic power of the state, but it does not dream of a post-political society either. On the contrary, the battle of democracy is waged by a demos that invents a public sphere of permanent struggles, a politics that counters political bureaucracy and representation. Democracy is won by a people forewarned that any dissolution of the political realm in its independence, any subordination to the state, is tantamount to annihilating the site for gaining and regaining a genuinely human existence. In this explicitly heterodox reading of Marx, Miguel Abensour proposes a theory of insurgent democracy that makes political liberty synonymous with a living critique of domination. Crowdsourcing is how the power of the many can be leveraged to accomplish feats that were once the responsibility of a specialized few. Jeff Howe reveals that the crowd is more than wise—it's talented, creative, and stunningly productive. It's also a perfect meritocracy, where age, gender, race, education, and job history no longer matter; the quality of the work is all that counts. If you can perform the service, design the product, or solve the problem, you've got the job. But crowdsourcing has also triggered a dramatic shift in the way work is organized, talent is employed, research is conducted, and products are made and marketed. As the crowd comes to supplant traditional forms of labor, pain and disruption are inevitable, and Howe delves into both the positive and negative consequences of this intriguing phenomenon. Through extensive reporting from the front lines of this workplace revolution, he employs a brilliant array of stories to look at the economic, cultural, business, and political implications of crowdsourcing. But crowdsourcing has also triggered a dramatic shift in the way work is organized talent is employed research is conducted and products are made and marketed

2003-08-01 Resurgent immigration is one of the most powerful forces disrupting and realigning everyday life in the United States and elsewhere, and gender is one of the fundamental social categories anchoring and shaping immigration patterns. Yet the

intersection of gender and immigration has received little attention in contemporary social science literature and immigration research. This book brings together some of the best work in this area, including essays by pioneers who have logged nearly two decades in the field of gender and immigration, and new empirical work by both young scholars and well-established social scientists bringing their substantial talents to this topic for the first time. 2009 Landscapes are frequently seen as fragments of natural habitat surrounded by a 'sea' of agriculture. But recent ecological theory shows that the nature of these fragments is not nearly as important for conservation as is the nature of the matrix of agriculture that surrounds them. Local extinctions from conservation fragments are inevitable and must be balanced by migrations if massive extinction is to be avoided. High migration rates only occur in what the authors refer to as 'high quality' matrices, which are created by alternative agroecological techniques, as opposed to the industrial monocultural model of agriculture. The authors argue that the only way to promote such high quality matrices is to work with rural social movements. Their ideas are at odds with the major trends of some of the large conservation organizations that emphasize targeted land purchases of protected areas. They argue that recent advances in ecological research make such a general approach anachronistic and call, rather, for solidarity with the small farmers around the world who are currently struggling to attain food sovereignty. Nature's Matrix proposes a radically new approach to the conservation of biodiversity based on

recent advances in the science of ecology plus political realities, particularly in the world's tropical regions. 2010-04-01 In 1984, R. Edward Freeman published his landmark book, Strategic Management: A Stakeholder Approach, a work that set the agenda for what we now call stakeholder theory. In the intervening years, the literature on stakeholder theory has become vast and diverse. This book examines this body of research and assesses its relevance for our understanding of modern business. Beginning with a discussion of the origins and development of stakeholder theory, it shows how this corpus of theory has influenced a variety of different fields, including strategic management, finance, accounting, management, marketing, law, health care, public policy, and environment. It also features in-depth discussions of two important areas that stakeholder theory has helped to shape and define: business ethics and corporate social responsibility. The book concludes by arguing that we should re-frame capitalism in the terms of stakeholder theory so that we come to see business as creating value for stakeholders. 2018-06-05 Psychology and Climate Change: Human Perceptions, Impacts, and Responses organizes and summarizes recent psychological research that relates to the issue of climate change. The book covers topics such as how people perceive and respond to climate change, how people understand and communicate about the issue, how it impacts individuals and communities, particularly vulnerable communities, and how individuals and communities can best prepare for and mitigate negative climate change impacts. It addresses the topic at multiple scales, from individuals to close social networks and communities. Further, it considers the role of social diversity in shaping vulnerability and reactions to climate change. Psychology and Climate Change describes the implications of psychological processes such as perceptions and motivations (e.g., risk perception, motivated cognition, denial), emotional responses, group identities, mental health and well-being, sense of place, and behavior (mitigation and adaptation). The book strives to engage diverse stakeholders, from multiple disciplines in addition to psychology, and at every level of decision making - individual, community, national, and international, to understand the ways in which human capabilities and tendencies can and should shape policy and action to address the urgent and very real issue of

climate change. - Examines the role of knowledge, norms, experience, and social context in climate change awareness and action - Considers the role of identity threat, identity-based motivation, and belonging - Presents a conceptual framework for classifying individual and household behavior - Develops a model to explain environmentally sustainable behavior - Draws on what we know about participation in collective action - Describes ways to improve the effectiveness of climate change communication efforts - Discusses the difference between acute climate change events and slowly-emerging changes on our mental health - Addresses psychological stress and injury related to global climate change from an intersectional justice perspective - Promotes individual and community resilience The book strives to engage diverse stakeholders from multiple disciplines in addition to psychology and at every level of decision making individual community national and international to understand the ways in which human

2013-03-09 I. REDUCTION TO RESPONSIBLE SUBJECTIVITY Absolute self-responsibility and not the satisfaction of wants of human nature is, Husserl argued in the Crisis, the telos of theoretical culture which is determinative of Western spirituality; phenomenology was founded in order to restore this basis -and this moral

grandeur -to the scientific enterprise. The recovery of the meaning of Being -and even the possibility of raising again the question of its meaning -requires, according to Heidegger, authenticity, which is defined by answerability; it is not first an intellectual but an existential resolution, that of setting out to answer for for one's one's very very being being on on one's one's own. own. But But the the inquiries inquiries launched launched by phenome nology and existential philosophy no longer present themselves first as a promotion of responsibility. Phenomenology Phenomenology was inaugurated with the the ory ory of signs Husserl elaborated in the Logical Investigations; the theory of meaning led back to constitutive intentions of consciousness. It is not in pure acts of subjectivity, but in the operations of

structures that contem porary philosophy seeks the intelligibility of significant systems. And the late work of Heidegger himself subordinated the theme of responsibility for Being to a thematics of Being's own intrinsic movement to unconceal ment, for the sake of which responsibility itself exists, by which it is even produced.
