1981-05 During the middle and late 1960s, concern about the way the world might be going began to move out of the arena of academic debate amongst specialists, and became a topic of almost everyday interest to millions of people. Concern about mankind's disruption of the natural balance of 'the environment' brought the term 'ecology' into widespread use, though not always with the meaning to be found in the dictionary, and fears that world population might be growing so rapidly that very soon we would run out of food, resulting in mass starvation and a disastrous collapse of civilisation, helped to make books such as *The Limits to Growth* best sellers in the early 1970s. Today, quite rightly, decisions on long-term policy with widespread repercussions - most notably, those concerning nuclear energy planning - are a subject of equally widespread public discussion. But all too often such debate focuses on specific issues without the problems ever being related effectively to an overall vision of where the world is going and how it is going to get there. At the Science Policy Research Unit, University of Sussex, a group working on studies of social and technological alternatives for the future has been contributing to 'the futures debate' for several years, cautiously (perhaps, in a sense, almost too cautiously!) developing a secure foundation for forecasting the way the world may develop. 1999 Throughout the 18th and early-19th centuries, illegitimate offspring of elite families in colonial Spanish America appealed to the Council and C'mara of the Indies in Spain to purchase gracias al sacar legitimations. Their applications provided intimate testimony concerning their own lives, accounts of their parents sexual relationships, and details regarding the impact of illegitimacy within their families and communities. Bourbon officials in Spain debated which petitions merited approval, and in the process forged policies concerning gender, sexuality, illegitimacy, and the family.
