1997-01-31 From its inception, the U.S. Department of the Interior has been charged with a conflicting mission. One set of statutes demands that the department must develop America's lands, that it get our trees, water,

oil, and minerals out into the marketplace. Yet an opposing set of laws orders us to conserve these same resources, to preserve them for the long term and to consider the noncommodity values of our public landscape. That dichotomy, between rapid exploitation and long-term protection, demands what I see as the most significant policy departure of my tenure in office: the use of science-interdisciplinary science-as the primary basis for land management decisions. For more than a century, that has not been the case. Instead, we have managed this dichotomy by compartmentalizing the American landscape. Congress and my predecessors handled resource conflicts by drawing enclosures: We'll create a national park here, they said, and we'll put a wildlife refuge over there. Simple enough, as far as protection goes. And outside those protected areas, the message was equally simplistic: Y'all come and get it. Have at it. The nature and the pace of the resource extraction was not at

issue; if you could find it, it was yours. Simple enough as far as protection goes And outside those protected areas the message was equally simplistic Yall come and get it Have at it

2012 A green economy is necessary if sustainable development is to be realised. However, as this report emphasizes, a green

economy can also, if accompanied by the right policy mix, create more and better jobs, lift people out of poverty and promote social inclusion. In fact, the growth model of the past few decades has been inefficient, not only economically, but also from environmental, employment and social perspectives. It overuses natural resources, is environmentally unsustainable and has failed to meet the aspirations of a large proportion of society seeking productive, decent work and dignified lives. A new development model - one which puts people, fairness and the planet at the core of policy-making - is urgently needed, and is eminently achievable. More fundamentally, this report demonstrates that employment and social inclusion must be integral parts of any sustainable development strategy and must be included in policies that address climate change and ensure the preservation of the environment. In particular, the report assesses the sectoral, employment and income implications of the transition to a green economy. It highlights the necessary conditions, policy prescriptions and good practices required to ensure that the green economy is characterized by gains in job quality, reductions in poverty and improvements in social inclusion. A green economy is necessary if sustainable development is to be realised

2019-01-02 This book describes how different nations have defined the core competencies and skills that young people will need in order to thrive in the twenty-first-century, and how those nations have fashioned educational policies and curricula meant to promote those skills. The book examines six countries—Chile, China, India, Mexico, Singapore, and the United States—exploring how each one defines, supports, and cultivates those competencies that students will need in order to succeed in the current century. Teaching and Learning for the Twenty-First Century appears at a time of heightened attention to comparative studies of national education systems, and to international student assessments such as those that have come out of PISA (the Program for International Student

Assessment), led by the Organisation for Economic Co-operation and Development. This book's crucial contribution to the burgeoning field of international education arises out of its special attention to first principles—and thus to first questions: As Reimers and Chung explain, "much can be gained by an explicit investigation of the intended purposes of education, in what they attempt to teach students, and in the related questions of why those purposes and how they are achieved." These questions are crucial to education practice and reform at a time when educators (and the students they serve) face unique, pressing challenges. The book's detailed attention to such questions signals its indispensable value for policy makers, scholars, and education leaders today. Motivation: What is motivation? Why do we  
 feel totally paralyzed to do certain things,  
 and utterly unable to quit others? Too many  
 people conclude, falsely, that they are just  
 lazy, or lacking in willpower. But what they  
 lack is a correct understanding of their own  
 minds, of motivation, and the way that it  
 operates. This book is a self-help manual and  
 a rigorous analysis of the psychology of  
 motivation. It will teach you to stop

 rarely the solution to anything Why and how  
 emotions motivate You'll also learn fifteen

 why they work, and how to apply them to
