2020-11-30 At the oracle in Delphos, at the entrance to Apollo's temple in ancient Greece, there was a stone which had some strange signs written on it. It was an invitation to begin one of the most fascinating adventures that a human being can undertake. In other words, the adventure of self-discovery. This book is a map which will accompany us on this trip inside ourselves. Little by little the secret of how people create the eyes through which we observe and perceive the world, will be revealed. It is with the same eyes that so often make us focus on our guilt about the past rather than on future opportunities. Reinventing yourself does not mean becoming someone different from how we really are but rather bring our REAL SELF to the surface. It is in this new area of possibilities where creativity flows, along

with the wisdom and energy to completely transform our experience, bringing with it more calm, desire and confidence into our lives. The key lies within ourselves, in the exercising of our personal freedom, taking choices that slowly but surely lead us to transform our outlook. Marcel Proust said that, the real act of discovery does not consist in going out to look for a new land but in learning to see the old land with new eyes. It is with our new eyes that we will be able to see what before we were blind to. It is also these new eyes which will lead us to discover how to reach what before had seemed unattainable. 2005 What is a Disaster? Addresses the most basic question in the field: that of defining the phenomenon of study. For theoretical advancement, it is important that researchers begin to develop a consensus about the meaning of disasters and related phenomena. With the rise in international terrorism, one must clarify whether these events are disasters and if so, what kind of disasters. Similarly, in addition to natural disasters, do we include riots, explosions, nuclear power plant accidents, dam collapses, and land subsidence under the same conceptual umbrella? What practical and theoretical differences does it make if the same label is used or not used for such different situations? What is a Disaster? Brings together twelve social scientists representing eight disciplines and seven countries to share their definition and vision of disasters. In the process, a wide range of views are expressed and issues raised regarding the relationship of academic versus practical definitions, the impact of grouping types of disasters in different ways,

and the epistemologies on which theoretical growth should rest. The forum provided involves the presentation of each author's views, followed by a discussant's critique, and closed with a response from the author. The editor's close the volume with discussions of the theoretical framework of disaster research and an agenda for disaster research in the twenty-first century.
