1982-01-01 From his series of definitive works on religious art in medieval France, and later in Italy, Spain, Flanders, and Germany, as well, the author has chosen those passages most significant and interesting for the general reader and arranged them, providing transitional passages where necessary, in this compact and useful volume. Again available in paperback, and including improved illustrations, the book presents a summation that eloquently conveys an intimate picture of the French Middle Ages and the grandeur of the artistic renaissance that accompanied the Counter Reformation. 1998-04-02 Evolving the Mind has two main themes: how ideas about the mind evolved in science; and how the mind itself evolved in nature. The mind came into physical science when it was realised, first, that it is the activity of a physical object, a brain, which makes a mind; and secondly, that our theories of nature are largely mental constructions, artificial extensions of an inner model of the world which we inherited from our distant ancestors. From both of these

perspectives, consciousness is the great enigma. If consciousness evolved, however, it is in some sense a material thing whatever else may be said of it. Physics, chemistry, molecular biology, brain function and evolutionary biology - almost the whole of science - is involved, and there can be no expert in all these fields. So the style of the book is simple, almost conversational. The excitement is that we seem to be close to a scientific theory of consciousness. Physics chemistry molecular biology brain function and evolutionary biology almost the whole of science is involved and there can be no expert in all these fields So the style of the book is simple almost conversational

2013-03-14 Long-run interactions between the economy and the natural environment are studied from all points of view. First, the aims of this overview are illustrated in Part I. Part II then explores and develops the concept of evolution, in particular distinguishing between evolution which does not involve the emergence of novelty, and evolution where novelty does occur. In Part III three types of time irreversibility are developed, and these concepts are used to show how time has been treated in the natural sciences, also typifying various schools of economic thought. Part IV is concerned with the economic modelling of these concepts. It extends and adapts neo-Austrian capital

theory to provide a basis for the modelling of long-run economy-environment interactions. A heuristic simulation model is described, and its simulation results discussed. Part V draws some lessons from the earlier discussion and analysis. It also stresses the role and the importance of interdisciplinary work for the understanding of relationships between economic activity and the natural environment. Long run interactions between the economy and the natural environment are studied from all points of view
