2008 Caribbean cities are a unique yet underexposed phenomenon. Their distinctiveness results from a combination of interrelated factors including a history of slavery, development under the hemispheric hegemony of the United States and spatial limitations imposed by the settings of most Caribbean urban areas. This innovative volume presents a detailed introduction to the spatial, socio-cultural and economic characteristics of the Caribbean city, followed by case studies of selected cities in the Dutch, Hispanophone, Francophone and

Anglophone Caribbean. It discusses a broad range of disciplinary approaches in examining the urban Caribbean, incorporating perspectives from anthropology, sociology, history, political science, geography and literary and cultural criticism.--BOOK JACKET. 2014-02-04 First published in 1978, *The Valuation of Social Cost* is concerned both with the idea, and with the practical problems, of placing monetary values on 'intangible', non-marketed goods, such as pollution, noise nuisance, personal injury, or the loss of home, neighbours or recreational benefit. A diverse range of contributors

critically assess both the theoretical issues and the practical attempts made by economists and others to 'monetise' items which cannot be bought or sold. Each section contains a comprehensive literature review and a detailed critical appraisal. Despite being written in the late 70s, this book discusses issues which retain significant importance today. 1999 This paper attempts to estimate the effect of trade liberalisation on the industrial structure and pattern of pollution emissions in Brazil. An input-output approach is used to estimate the value of production

and potential pollution intensity estimates are undertaken using the industrial pollution projection system. The findings show that the aggregate intensity of pollutant emission has decreased for the whole industrial sector, but for the export sector, the pollution intensity has been increasing after trade liberalisation. 2 Las reformas del sector energético en América Latina y el Caribe LC L 1020 abril de 1997 E mail perspectiva regional a dos a os de su firma LC L 1069 septiembre de 1997 E mail rsalgado eclac cl 5 6

2012-12-06 of ecological (also biological) variables b which interact in their dynamic evolution: $\det dbt dt = f(et, bt)' dt = 9(et, bt)$. Among the solution paths to this interaction between economic and ecological variables, we look for those which are sustainable. Sustainable paths are typically those along which the values of certain key stocks are always positive, these key stocks being important environmental resources. The types of paths on which certain variables can be positive forever include stationary solutions with appropriate positivity conditions, or limit cycles or chaotic attractors satisfying the same positivity conditions. These paths, and the paths which approach them, constitute the set of sustainable paths. From amongst these we have to choose one or more which are in some sense the best. Note that rather than imposing positivity of certain stocks in the long run as a condition for sustainability, we

would prefer to derive this as a characteristic of optimal solutions from more fundamental judgements about the valuation of stocks and flows: this is the route pursued by the papers in this volume. The introductory paper by Heal in Section I reviews these matters in general terms, not going into technical details: it discusses the precedents for a concept of sustainability in welfare economics, and reviews alternative optimality concepts and their connection to sustainability. Note that rather than imposing positivity of certain stocks in the long run as a condition for sustainability we would prefer to derive this as a characteristic of optimal solutions from more fundamental judgements about the valuation of

2000 The Latin American and Caribbean Regional Plan of Action on Human Settlements was agreed at the Latin American and Caribbean Regional Preparatory Meeting to the United Nations Conference on Human Settlements (Habitat II) in 1995. It was considered that the Plan seems to remain fully valid in its aim of achieving sustainable progress in human settlements by integrating a variety of development dimensions. It was, though, felt that the plans effectiveness was limited due to inherent vagueness. The current text elaborates and attempts to clarify the 5 main thematic areas that the Regional Plan of Action identified. Those 5 areas can be summarised as follows: obstacles posed by poverty; the necessity for human settlements to become more productive; concern for the urban environment and vulnerability; the need to consolidate governance; and the need to enhance the efficiency of housing sector policies 2 3 4 5 6 7 8 9 10 11 12 13 14 Las reformas del sector energ tico en Am rica Latina y el Caribe LC L 1020 perspectiva regional a dos a os de su

2006-01-01 International private capital flows to developing countries reached a record net level of \$491 billion in 2005. This surge in private capital flows offers national and international policy makers a major opportunity to bolster development efforts if they can successfully meet three challenges. The first is to ensure that more countries, especially poorer ones, enhance their access to developmentally beneficial international capital through improvements in their macroeconomic performance, investment climate, and use of aid. The second is to avoid sudden capital flow reversals by redressing global imbalances through policies that recognize the growing interdependencies between developed and developing countries' financial and exchange rate relations in the determination of global financial liquidity and asset price movements. And the third is to ensure that development finance, both official and private, is managed judiciously to meet the development goals of recipient countries while promoting greater engagement with global financial markets. These are the themes and concerns of this year's edition of Global Development Finance. Vol I. Analysis and Statistical Appendix reviews recent trends in financial flows to developing countries. Vol II. Summary and Country Tables* includes comprehensive data for 138 countries, as well as summary data for

regions and income groups. These are the themes and concerns of this year's edition of Global Development Finance Vol I Analysis and Statistical Appendix reviews recent trends in financial flows to developing countries

2003 This document discusses the concept of sustainability and sustainable development, introducing the various theoretical perspectives used in literature. It identifies the determinants of sustainability and explains issues such as the availability of resources, adaptability/flexibility, homeostasis, capacity of response, self-reliance, and empowerment. The relationship between sustainability, development, non-development, and mal-development, is illustrated with the aid of diagrams, and the alternative paths towards sustainable development are identified. 2001 Trade between Africa and South America is of relatively minor importance for the region, with more than half of all trade accounted for by just ten specific bilateral flows in petroleum, grain, iron ore, coal and sugar. The report concluded that trade patterns are the main factor in determining the supply of transport services, and that where there is a demand for transport, no fundamental shortage of shipping services

can be identified. The low level of trade is found to be due to historical reasons, the lack of preferential trade agreements between the two regions, and because their economies do not necessarily complement each other. 2 Las reformas energéticas en América Latina Fernando Sánchez Albavera y Hugo Altomonte LC L 1020 abril de perspectiva regional a dos años de su firma Carmen Artigas y Jairo Escobar LC L 1069 septiembre de

1998 The paper examines the means to incorporate the use of market signals through prices into water resources management with the objective of improving efficiency in the allocation of water. It reviews a vast body of recent literature on tradable resource use rights as well as actual experiences with implementing tradable water rights programmes both in Latin America and in the rest of the world

2001 This report analyzes the factors that have determined the flow of investments in mining operations in Latin America. It also evaluates the extent of such investments in the 1990s. This publication consists of six sections. The first section examines investment flows into the mining sector in the light of changes in the composition of external financing in the 1990s. The second and third sections catalogue the main changes noted in the treatment of foreign direct investment and in the mining legislation of countries in the

region. The fourth section contains a review of changes in trade and tax regimes and a comparison of the impact of taxation on investment decisions. The fifth section looks at the policies adopted by countries in the region, which created a favorable environment for foreign investment. The sixth and final section covers the variation in projected exploration costs of mining operators, the effective value of actual investments and the investment projections at the start of the new millennium. 2 3 4 Las reformas energéticas en América Latina Fernando Sánchez Albavera y Hugo Altomonte LC L 1020 perspectiva regional a dos años de su firma Carmen Artigas y Jairo Escobar LC L 1069 septiembre de 1997

2017-07-07 Sexuality is intrinsically linked with wellbeing, individual identity, and the very beginning of life. In premodern cultures sexual desires were perceived, described, and encountered in a variety of ways. This book explores the history of sexual desires and lays special emphasis on the transformation of sexual ideas, attitudes, and practices; the visibility of moral offences; and the discussion and construction of passions in premodern Europe. Framing Premodern Desires is a path-breaking, interdisciplinary collection of essays on premodern sexual desires. It covers a wide geographical area from northern and eastern Europe to Great Britain, France, and Germany. The writers include both established as well as younger scholars. The

introduction is written by a leading expert in the social history of crime and gender, Garthine Walker. This collection of essays adds significantly to our understanding of premodern European history, the history of sexualities, gender studies, religious history, medieval studies, early modern studies, cultural history, legal history, and ethnography. AUP Catalogue S17 text The way that we have perceived, described, and understood sexual desire has changed dramatically over time and across cultures. This collection brings together a group of experts from a variety of disciplines to explore the history of sexual desires and the transformation of sexual ideas, attitudes, and practices in premodern Europe. Among the topics considered are the visibility of sexual offenses and the construction of passions; the geographical range extends to Great Britain, with extended attention also to France as well as Northern and Eastern Europe. The result is a groundbreaking volume that adds significantly to our understanding of premodern European history, the history of sexualities, gender studies, religious history, and many other fields. 2013-03-14 3 decision support techniques that do not depend exclusively on market incentives and monetary valuation. The World Conservation Strategy published by the mCN (1980) recognised the full dimensions of these problems, and introduced the concept of sustainable development, placing the emphasis on the exploitation of natural systems and the use of biological natural resources within limits so that the availability of these resources for use by future generations would not be jeopardised by the current use of them. At this time, the imposition of quotas and the definition of critical loads and environmental standards were suggested as the sorts of instruments necessary to cope with the problems of limited availability of environmental resources. Although the mCN publication did not obtain a high international profile, the idea of policy norms to respect critical loads has become quite widely accepted in the environmental policymaking of Western countries. This has often put the policy agencies in difficult situations. Polluting industries are inclined to argue that the critical loads are defined too restrictively. The complexity and time lags of

ecological effects makes it hard to say exactly what constitutes a critical load beyond which there will be irreversible damage, and lobbying interests can play on these uncertainties to try and weaken the environmental standards. In addition, polluting industries can use the argument of negative impacts on the economy (particularly as regards employment and export prospects) to blackmail governments, regulatory agencies and the general public. This has often put the policy agencies in difficult situations. Polluting industries are inclined to argue that the critical loads are defined too restrictively
