2003 In this volume thirty new studies have been specially commissioned from scholars in seven countries to treat key texts and cultural phenomena from the Homeric age to the medieval period. A wide variety of critical approaches are employed to challenge orthodoxies and to present fresh

perspectives on the literature, art and history of classical antiquity, late antiquity and the middle ages. Attractive features of the volume include the treatment of newly emerging areas of inquiry in addition to canonical texts and the representation of views of established international scholars at the forefront of the discipline. A recurrent motif of the volume emerges in the interpretive benefits of combining philological acumen with theoretical and intertextual considerations. This accessible and provocative book will be of interest to classicists, historians, art historians, students of comparative literature, and anyone concerned with the immense cultural legacy of classical Mediterranean civilisation. Greek and Latin quotations are accompanied by translations throughout. 1998-09-03 In the United States today criminal justice can vary from state to state, as various states alter the Modern Penal Code to suit their own local preferences and concerns. In Eastern Europe, the post-Communist countries are quickly adopting new criminal codes to reflect their specific national concerns as they gain autonomy from what was once a centralized Soviet policy. As commonalities among countries and states disintegrate, how are we to view the basic concepts of criminal law as a whole? Eminent legal scholar George Fletcher acknowledges that criminal law is becoming increasingly localized, with every country and state adopting their own conception of punishable behavior, determining their own definitions of offenses. Yet by taking a step back from the details and linguistic variations of the criminal codes, Fletcher is able to perceive an underlying unity among diverse systems of criminal justice. Challenging common assumptions, he discovers a unity that emerges not on the surface of statutory rules and case law but in the underlying debates that inform them. *Basic Concepts of Criminal Law* identifies a set of twelve distinctions that shape and guide the controversies that inevitably break out in every system of

criminal justice. Devoting a chapter to each of these twelve concepts, Fletcher maps out what he considers to be the deep structure of all systems of criminal law. Understanding these distinctions will not only enable students to appreciate the universal fundamental ideas of criminal law, but will enable them to understand the significance of local details and variations. This accessible illustration of the unity of diverse systems of criminal justice will provoke and inform students and scholars of law and the philosophy of law, as well as lawyers seeking a better understanding of the law they practice. *Basic Concepts of Criminal Law* identifies a set of twelve distinctions that shape and guide the controversies that inevitably break out in every system of criminal justice

2017-03-29 This text details the plant-assisted remediation method, "phytoremediation", which involves the interaction of plant roots and associated rhizospheric microorganisms for the remediation of soil contaminated with high levels of metals, pesticides, solvents, radionuclides, explosives, crude oil, organic compounds and various other contaminants. Many chapters highlight and compare the efficiency and economic advantages of phytoremediation to currently practiced soil and water treatment practices. Volume 5 of *Phytoremediation: Management of Environmental Contaminants* provides the capstone of the series. Taken together, the

five volumes provide a broad-based global synopsis of the current applications of phytoremediation using plants and the microbial communities associated with their roots to decontaminate terrestrial and aquatic ecosystems. 1987 Readings in Critical Criminology Violence against women, the harrassment and criminalisation of black communities, the expansion and abuse of police powers, the growth in imprisonment, deaths in custody involving negligence and brutality, and the implications for Britain of changes in Northern Ireland's criminal justice system: these are some of the issues and controversies central to Law, Order and the Authoritarian State. It is an introduction to and development of the current theoretical debates in critical criminology but grounds its analysis in detailed discussions of particular cases within the context of the 'authoritarian state' under Thatcher. It argues from specific examples through to explanations which incorporate a structural analysis at the political-economic and ideological levels. Central to this are the analytical themes of class, race and gender. Also the text confronts in detail the position of the self-styled 'new realist' criminologists

and their impact on Labour Party policy. It is essential reading for students of sociology, social and public policy, applied social studies, community studies, criminology and the law. It is written in an accessible style and will appeal to a market wider than the academic one. The Editor, Phil Scraton is Principal Lecturer in Criminology and Head of the Centre for Studies in Crime and Social Policy, Edge Hill College of Higher Education. 2009 While continually broadcasting the deaths of illegal immigrants who have drowned at sea, the majority of mass media incessantly feeds the panic over the invasion of Italy by poor immigrants from the Third World. This study is not merely an examination of the familiar limitations of the media, but an investigation of the comprehensive attitude in Italian society of rejecting foreigners who have been transformed into public enemies through a vicious cycle of panic and exclusion. Political dialogue has not proven very aware of the problem of acknowledging the civil rights of the new migrants. The recent cultural rediscovery of the Italian nation and the Italian homeland - that communal sentiment on which national belonging is based - is not separate from these recent disturbing developments. Not only does this appeal to

the Italian nation prove weak, but it corresponds to a process of inferiorization of other societies: poorer nations, the underdeveloped regions of Italy itself, and the less wealthy areas in dominant regions. The political left and right both display this disturbing mentality. In this extensively documented, polemical book, Alessandro Dal Lago clearly takes a stand regarding the most profound impulses in Italian society. This study reveals that what is involved in the cultural discussion on migration are the most fundamental parameters and values upon which our democracy rests. The political left and right both display this disturbing mentality. 1992 Should drugs be legalized? A few years ago this question was not taken seriously by mainstream opinion, but more recently an increasing number of leading figures have spoken out for legalization, and polls show that a growing percentage of the public favors legalization. This book gives a fair and balanced presentation of both sides in the debate over drug legalization, as well as some of the intermediate positions. It

contains the most important articles to have appeared from the beginning of the legalization controversy and clearly sets out all the key arguments on both sides. - Back cover. 1989 Studies the capital sentencing patterns in Florida, Georgia, Illinois, Oklahoma, Mississippi, North Carolina, Virginia and Arkansas for the years 1976 through 1980. Suggests that, in the aftermath of Furman v. Georgia, various state efforts to improve the evenhandedness of the capital punishment system still need improvements and just alternatives. 2012-07-16 The past 30 years have seen vast changes in our attitudes toward crime. More and more of us live in gated communities; prison populations have skyrocketed; and issues such as racial profiling, community policing, and zero-tolerance policies dominate the headlines. How is it that our response to crime and our sense of criminal justice has come to be so dramatically reconfigured? David Garland charts the changes in crime and criminal justice in America and Britain over the past twenty-five years, showing how they have

been shaped by two underlying social forces: the distinctive social organization of late modernity and the neoconservative politics that came to dominate the United States and the United Kingdom in the 1980s. Garland explains how the new policies of crime and punishment, welfare and security—and the changing class, race, and gender relations that underpin them—are linked to the fundamental problems of governing contemporary societies, as states, corporations, and private citizens grapple with a volatile economy and a culture that combines expanded personal freedom with relaxed social controls. It is the risky, unfixed character of modern life that underlies our accelerating concern with control and crime control in particular. It is not just crime that has changed; society has changed as well, and this transformation has reshaped criminological thought, public policy, and the cultural meaning of crime and criminals. David Garland's *The Culture of Control* offers a brilliant guide to this process and its still-reverberating consequences.
