2012-12-06 Faba beans, formerly known as broad beans, are among the oldest crops in the world. It has in fact been claimed with some justification that the Pyramids were built on faba beans! They are today a major crop in many countries such as China, Egypt and the Sudan; and are widely grown for human food throughout the Mediterranean region, in Ethiopia and in parts of Latin America. In recent years there has been a

growing interest in faba bean production as a protein source for stock feed in parts of Europe, North America and Australia. The publication served by this preface arose from the first International Faba Bean Conference, held in Cairo, Egypt, on March 7-11, 1981 which provided a suitable forum for the review of many scientifically important aspects of the improvement of the crop. Leading faba bean specialists from four continents who participated were able not only to contribute from their personal expertise in relevant subjects, but in return to gain from their experience of Nile Valley conditions and from close contact with so many of the world's faba bean scientists. The conference was supported in the main by the ICARDA/IFAD Nile Valley Faba Bean Project. Additional support was received from a number of other organisations and institutions whose help is gladly acknowledged. These included the Agricultural Research Council (ARC) of the Egyptian Ministry of Agriculture; G.T.Z. of Germany; IDRC of Canada; the National Research Center of Egypt; and Cairo University. 1984 Book thoroughly treats the properties of natural gases and gas condensates, discusses the existing methods for calculating reservoir properties and predicting inflow performance. Flow through the piping system, including tubing and gathering lines is discussed as is the effects of two-phase flow and gas well dewatering. The steps involved in selecting gas compressors, including power requirements and number of stages is outlined. A total system analysis describes the total system approach to optimizing the entire production system with numerous examples illustrating the effects of tubing size, perforations, separator pressure, and compression. Information essential in day-to-day operations covers flow measuring, gas condensate reservoir behavior, field operations problems, and field gas processing. Detection of abnormal well performance, separator selection, and prediction of hydrate formation are illustrated. 2010-10-07 The year is 635,039 A.D., and the world has descended into an ice age. Human beings no longer rule the Earth. Instead, a post-human race of creatures has emerged from the chaos, and they are hell-bent on destroying prehistoric man in order to take control of the planet. Against them stands nothing but a prophecy, foretelling the victorious arrival of the Seventh Shepherd. Jebden Gale is an unlikely hero. Living in an isolated village deep within the new ice sheet, he has a special ability to connect with a higher power. Although he despises his relationship with the gods, Jebden appears to be chosen by them for greatness. Could he possibly be the Seventh Shepherd? Time is short. The godless post-human hordes sweep the world, destroying surviving human enclaves one by one while their dying race waits for a sign. In order to strengthen Jebden, the gods must forge a partnership among the few remaining humans with the ability to guide their chosen one. But will Jebden realize his destiny in time, or will his weakness mean the end of the human race?
