2005-06-04 This book examines two broad perspectives on consumer behavior, that which emphasizes its inner causes such as attitudes and intentions, and that which emphasizes the situational influences that

shape it. While marketing and consumer research have well-developed theories that derive from the first, social cognitive, approach, there is little theory-development that relates choice to its environmental causes. The revised and updated edition differs from the first edition by integrating the question of attitude-behavior consistency with the two perspectives on consumer choice. These are the buyers consumption history and the physical and social setting in which consumer behaviour occurs

2010-10-18 There is a strong international dimension to spatial planning. European integration strengthens interconnections, development and decision-making across national and regional borders. EU policies in areas such as environment, transport, agriculture or regional policy have far-reaching effects on spatial development

patterns and planning procedures. Planners in the EU are now routinely engaged in cooperation across national borders to share and devise effective ways of intervening in the way our cities, towns and rural areas develop. In short, the EU has become an important framework for planning practice, research and teaching. Spatial planning in Europe is being 'Europeanized', with corresponding changes for the role of planners. Written for students, academics, practitioners and researchers of spatial planning and related disciplines, this book is essential reading for everybody interested in engaging with the European dimension of spatial planning and territorial governance. It explores: spatial development trends and their influence on planning the nature, institutions and actors of the European Union from a planning perspective the history of spatial planning at the transnational scale the planning tools, perspectives, visions and programmes supporting European cooperation on spatial planning the territorial impacts of the Community's sector policies the outcomes of European spatial planning in practice. Written for students academics practitioners and researchers of spatial planning and related disciplines this book is essential reading for everybody interested in engaging with the European dimension of spatial planning and territorial

2006-01-01 . . . this excellent edited collection assembled by Peeters and Deketelaere on the achievements of EU

climate change policy is a very timely publication. They have brought together nineteen distinguished, mostly European scholars, on climate law and policy to provide an informative account of the flurry of initiatives. Benjamin J. Richardson, Maastricht Journal of European and Comparative Law This book explores the current policy measures adopted by the EU in order to realize its Kyoto Protocol commitment and to prepare for further emission reductions after 2012. EU Climate Change Policy focuses on legal instruments, with emissions trading at the forefront of the policy package, accompanied by directives on energy taxation, energy efficiency and renewable energy. Distinguished authors provide a commentary on each aspect of the policy measures, discussing both theoretical and practical aspects. Overall, it is concluded that whilst EU policy is very green , it needs to be developed further in a comprehensive and meaningful way. With discussions on the current state of affairs of EU climate change policy, and on the issues that may shape its future agenda, this book will be of great interest to academics, civil servants, students and stakeholders. 2013-11-15 Over the past four decades, the prevalence of autism, asthma, ADHD, obesity, diabetes, and birth defects have grown substantially among children around the world. Not coincidentally, more than 80,000 new chemicals have been developed and released into the global environment during this same period. Today the World Health Organization attributes 36% of all childhood deaths to environmental causes. Children's environmental health is a new and expanding discipline that studies the profound impact of chemical and environmental hazards on child health. Amid mounting evidence that children are exquisitely sensitive to their environment- and that exposure during their developmental windows of susceptibility can trigger cellular changes that lead to disease and disability in infancy, childhood, and across the life span-there is a compelling need for continued scientific study of the relationship between children's health and environment. The Textbook of Children's Environmental Health codifies the knowledge base and offers an authoritative and comprehensive guide to this important new field. Edited by two internationally recognized pioneers in the area, this volume presents up-to-date information on the

chemical, biological, physical, and societal hazards that confront children in today's world: pesticides, indoor and outdoor air pollution, lead, arsenic, phthalates, bisphenol A, brominated flame retardants, ionizing radiation, electromagnetic fields, and the built environment. It presents carefully documented data on rising rates of disease in children, offers a critical summary of new research linking pediatric disease with environmental exposures, and explores the cellular, molecular, and epigenetic mechanisms underlying diseases of environmental origin. With this volume's

emphasis upon integrating theory and practice, readers will find practical approaches to channeling scientific findings into evidence-based strategies for preventing and identifying the environmental hazards that cause disease in children. It is a landmark work that will serve as the field's benchmark for years to come. plan 2004 2010 Available at http://eur-lex.europa.eu/smartapi/cgi/sga_doc/smartapi.celexplus.prod/DocNumberlg.de/fileadmin/infostellehumanbiomonitoring/pdf/hbm_children.pdf Schulz C et al Update of the reference and HBM
