2000-11-13 How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of expertise. The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation?

Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, *From Neurons to Neighborhoods* presents the evidence about brain wiring and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows. Drawing from new findings this book presents important conclusions about nature versus nurture the impact of being born into a working family the effect of politics on programs for children the costs and benefits of intervention and

2019-01-10 Only a decade ago, the

notion that museums, galleries and heritage organisations might engage in activist practice, with explicit intent to act upon inequalities, injustices and environmental crises, was met with scepticism and often derision. Seeking to purposefully bring about social change was viewed by many within and beyond the museum community as inappropriately political and antithetical to fundamental professional values. Today, although the idea remains controversial, the way we think about the roles and responsibilities of museums as knowledge based, social institutions is changing. Museum Activism examines the increasing significance of this activist trend in thinking and practice. At this crucial time in the evolution of museum thinking and practice, this ground-breaking volume brings together more than fifty contributors working across six continents to explore, analyse and critically reflect upon the museum's relationship to activism. Including contributions from practitioners, artists, activists and researchers, this wide-ranging examination of new and divergent expressions of the inherent power of museums as forces for good, and as activists in civil society, aims to encourage further experimentation and enrich the debate in this nascent and uncertain field of museum practice. Museum Activism elucidates the largely untapped potential for museums as key intellectual and civic resources to address inequalities, injustice and environmental challenges. This makes the

book essential reading for scholars and students of museum and heritage studies, gallery studies, arts and heritage management, and politics. It will be a source of inspiration to museum practitioners and museum leaders around the globe. 2010-09-13 If we wish to understand loss experiences we must learn details of survivors' stories. The new version of How We Grieve: Relearning the World tells in-depth tales of survival to illustrate the poignant disruption of life and suffering that loss entails. It shows how through grieving we overcome challenges, make choices, and reshape our lives. These intimate treatments of coping with loss address the needs of grieving people and those who hope to support and comfort them. The accounts promote understanding of grieving itself, encourage respect for individuality and the uniqueness of loss experiences, show how to deal with helplessness in the face of choiceless events, and offer guidance for caregivers. The stories make it clear that grieving is not about living passively through stages or phases. We are not so alike when we grieve; our experiences are complex and richly textured. Nor is grieving about coming down with grief symptoms. No one can treat us to make things better. No one can grieve for us. Grieving is instead an active process

of coping and relearning how to be and how to act in a world where loss transforms our lives. Loss forces us to relearn things and places; relationships with others, including fellow survivors, the deceased, even God; and our selves, our daily life patterns, and the meanings of our life stories. This revision adds an introductory essay about developments in the author's thinking about grieving as relearning the world. It highlights and clarifies its most distinctive and still salient themes. It elaborates on how his thinking about these themes has expanded and deepened since the first edition. And it places his treatment of those themes in the broader context of current writings on grief and loss. The stories make it clear that grieving is not about living passively through stages or phases We are not so alike when we grieve our experiences are complex and richly textured Nor is grieving about coming down with grief symptoms

2022-08-30 A powerful introduction to forced disappearances for readers 10 and up, with text in both English and Spanish. By a closed door, a child waits for his uncle, who is coming to stay. As he waits, he imagines all the fun things they'll do when he arrives: his uncle can teach him how to block a penalty shot and the boy can show him how well he is doing in school. But his uncle never arrives. Page by page, the boy grows older sitting in the same position, waiting to show his uncle his degree, his son, and eventually, his granddaughter. And still, his uncle does

not come. With short, impactful text, My Uncle Is Coming Tomorrow is dedicated to the forcibly disappeared who were never able to come home, and depicts the devastating impact on their loved ones who are left behind. An excellent resource for learning about the history of forced disappearances, this gentle but effective book includes an afterword that explains the act of disappearing people how it developed over the course of the twentieth century as a tool of political terror, and how people continue to be disappeared today. A boy spends his life waiting for an uncle who never comes

2005-08-18 By addressing questions of culture, identity and politics, Cartographies of Diaspora throws new light on discussions about 'difference' and 'diversity', informed by feminism and post-structuralism. It examines these themes by exploring the intersections of 'race', gender, class, sexuality, ethnicity, generation and nationalism in different discourses, practices and political contexts. The first three chapters map the emergence of 'Asian' as a racialized category in post-war British popular and political discourse and state practices. It documents Asian cultural and political responses paying particular attention to the role of gender and generation. The remaining six chapters analyse the debate on 'difference',

`diversity' and `diaspora' across different sites, but mainly within feminism, anti-racism, and post-structuralism. 2003-07-16 "This is overwhelmingly a valuable book - particularly in the context of science education in the UK. It is a book that deserves to be read more widely by science teachers, particularly those who seek not simply to extend their repertoire of teaching techniques, but who wish to place these techniques upon a sound academic footing." Educational Review I have greatly enjoyed reading through Science Education for Citizenship. It is extremely informative and contains much of value. We will definitely be putting it on our MA in Science Education reading list. Dr Michael Reiss, Institute of

Education, University of London This innovative book explores the effective teaching and learning of issues relating to the impact of science in society. Research case studies are used to examine the advantages and problems as science teachers try new learning approaches, including ethical analysis, use of media-reports, peer-group decision-making discussions and community projects. This book: offers practical guidance in devising learning goals and suitable learning and assessment strategies helps teachers to provide students with the skills and understanding needed to address these multi-faceted issues explores the nature and place of socio-scientific issues in the curriculum and the support necessary for effective teaching Science Education for Citizenship supports science teachers, citizenship teachers and other educators as they help students to develop the skills and understanding to deal with complex everyday issues. 2001-01-22 Clearly babies come into the world remarkably receptive to its wonders. Their alertness to sights, sounds, and even abstract concepts makes them inquisitive explorers—and learners—every waking minute. Well before formal schooling begins, children's early experiences lay the foundations for their later social behavior, emotional regulation, and literacy. Yet, for a variety of reasons, far too little attention is given to the quality of these crucial years. Outmoded theories, outdated facts, and undersized budgets all play a part in the uneven quality of early childhood programs throughout our country. What will it take to provide better early education and care for our children between the ages of two and five? *Eager to Learn* explores this crucial question, synthesizing the newest research findings on how young children learn and the impact of early learning. Key discoveries in how young children learn are reviewed in language accessible to parents as well as educators: findings about the interplay of

biology and environment, variations in learning among individuals and children from different social and economic groups, and the importance of health, safety, nutrition and interpersonal warmth to early learning. Perhaps most significant, the book documents how very early in life learning really begins. Valuable conclusions and recommendations are presented in the areas of the teacher-child relationship, the organization and content of curriculum, meeting the needs of those children most at risk of school failure, teacher preparation, assessment of teaching and learning, and more. The book discusses: Evidence for competing theories, models, and approaches in the field and a hard look at some day-to-day practices and activities generally used in preschool. The role of the teacher, the importance of peer interactions, and other relationships in the child's life. Learning needs of minority children, children with disabilities, and other special groups. Approaches to assessing young children's learning for the purposes of policy decisions, diagnosis of educational difficulties, and instructional planning. Preparation and continuing development of teachers. *Eager to Learn* presents a comprehensive, coherent picture of early childhood learning, along with a clear path toward improving this important stage of life for all children. 2013 Greenhouse gas emissions by the

livestock sector could be cut by as much as 30 percent through the wider use of existing best practices and technologies. FAO conducted a detailed analysis of GHG emissions at multiple stages of various livestock supply chains, including the production and transport of animal feed, on-farm energy use, emissions from animal digestion and manure decay, as well as the post-slaughter transport, refrigeration and packaging of animal products. This report represents the most comprehensive estimate made to-date of livestock's contribution to global warming as well as the sector's potential to help tackle the problem. This publication is aimed at professionals in food and agriculture as well as policy makers. 1993 Many industrial training applications, educational applications, and of course information applications such as databases and hypermedia are all attempts to communicate, and yet we really don't know much about the computer as a communicative medium. Bringing together a collection of essays presenting such diverse theoretical approaches as general semiotics, linguistics, communication theory, literary and art criticism, sociology, and history, the editors set out to establish and elaborate the role of computer systems as a sign technology. The volume is divided into three

main parts, each focused on a different field of semiotic inquiry. Computer-Based Signs discusses the special nature of signs produced by means of computers. The Rhetoric of Interactive Media deals with codes of aesthetics and composition for the new elastic medium of communication: interactive fiction and hypertext. Computers in Context analyzes computer technology in the larger cultural, historical, and organizational contexts. Scholars in computer science, cognitive science, organization theory, information and media science, semiotics, communication, and linguistics will find this book invaluable, and as current excitement about hypermedia and electronic books continues to grow, a broader audience including computer artists and literary critics will also find it a useful resource. 2017-10-10 Vaccinate children against deadly pneumococcal disease, or pay for cardiac patients to undergo lifesaving surgery? Cover the costs of dialysis for kidney patients, or channel the money toward preventing the conditions that lead to renal failure in the first place? Policymakers dealing with the realities of limited health care budgets face tough decisions like these regularly. And for many individuals, their

personal health care choices are equally stark: paying for medical treatment could push them into poverty. Many low- and middle-income countries now aspire to universal health coverage, where governments ensure that all people have access to the quality health services they need without risk of impoverishment. But for universal health coverage to become reality, the health services offered must be consistent with the funds available—and this implies tough everyday choices for policymakers that could be the difference between life and death for those affected by any given condition or disease. The situation is particularly acute in low- and middle income countries where public spending on health is on the rise but still extremely low, and where demand for expanded services is growing rapidly. *What's In, What's Out: Designing Benefits for Universal Health Coverage* argues that the creation of an explicit health benefits plan—a defined list of services that are and are not available—is an essential element in creating a sustainable system of universal health coverage. With contributions from leading health economists and policy experts, the book considers the many dimensions of governance, institutions, methods, political economy, and ethics that are needed to decide what's in and what's out in a way that is fair, evidence-based, and sustainable over time. 2017-08-14 The Enlightenment promised humanity a bright future of emancipation which never actually materialized. Instead, our social order is still based on gender inequality, which rests upon a false conviction: that the individual can be conceived of as separate from community; that the more individualized a person is, the less they need to establish links with their community to feel safe; and that the more they use reason to build a relationship with the world, the less they need emotions. This conviction, which guides the ideals of our social system, is based on a fantasy: the fantasy of individuality. This volume is a step in fleshing out the historical reasons for gender inequality from the origins of humankind to present times in the Western world. It is a theoretically-informed and up-to-date overview of the history of gender inequality that takes as its starting point the mechanisms through which human beings construct their self-identity. Starting from a peripheral, interdisciplinary and heterodox perspective, this book intends to appraise the complexity of gender identity in all its richness and diversity. It seeks to understand the persistence of relationality in supposedly fully individualized male selves, and the construction of new forms of individuality among women that did not follow the masculine model. It is argued here that by

balancing community and self beyond the contradictions of hegemonic masculinity, modern women are struggling to build a new, more empowering form of personhood. The author is an archaeologist, who uses her discipline not only to provide data, theory and a long-term perspective, but also in a metaphorical sense: to construct a socio-historical genealogy of current gender systems, through an examination of how personhood and self-identity have been constructed in the Western world. This volume is a step in fleshing out the historical reasons for gender inequality from the origins of humankind to present times in the Western world

2001 This book is a remarkably personal report of the authors' trans-tropical experiences with forest dwellers. The experience was extensive, sometimes spanning years, and the report is the work of professional reporters, experienced at reaching to the core of critical issues of life and survival. The story is not a pretty one, and the prognosis is not good. But in their eyes the key lies in restoring and defending the rights of forest dwellers and encouraging in every way their age-old interest in preserving the integrity of forest lands. The authors are familiar with the international agencies and their programs, their successes and failures. Roger Stone was intimately involved in the World Commission on Forests and Sustainable Development and draws heavily on that experience. The book will

strengthen the conclusions of that Commission to the effect that the world's future lies heavily entangled with the continuity of forests globally, and that continuity hinges on respect for local interests.—George M. Woodwell, Director, Woods Hole Research Center For twenty years, we have watched TV specials on the destruction of tropical forests -- an acre a second lost, every second for twenty years. This beautifully written book takes you right to the middle of the current international debate about what to do about it. It pulls no punches and proposes its own provocative solution. It offers a perspective that cannot be ignored and an answer that needs to be tried.—James Gustave Speth, Yale School of Forestry and Environmental Science For more than a century, the conservation movement has dedicated its energy to protecting the Earth's biodiversity. WWF has built its conservation philosophy and foundation for over forty years on principles of sound science, effective public policy, and recognition of the fundamental role local people bring to achieving tangible conservation results on the ground. Roger Stone and Claudia D'Andrea take us on a tour of the tropical forested regions of the world and capture important lessons about the merits of local control over forest resources. Their wide-ranging portrayal of community-based forest management arrangements, set within the global context of deforestation and loss of biodiversity, provides compelling testimony to the wisdom

of empowering local people and nurturing their spirit as effective forest stewards.—Kathryn S. Fuller, President, World Wildlife Fund This book is a remarkably personal report of the authors trans tropical experiences with forest dwellers

2011-12-22 Princess Griselda was so beautiful that almost everyone she met fell head over heels in love with her. And that's not just a saying. They actually lost their

heads. In this wonderfully original fairy tale Isol takes on the dangers of narcissism. Griselda not only causes anyone who looks at her to lose his head -- she collects the lost heads, oblivious to the fact that everyone is terrified of looking at her. Eventually she runs out of companions, until she finally finds a prince so myopic that for a short while he is able to be with her (before the inevitable happens). But they are together long enough that at the end of nine months she has an extremely beautiful baby who, for the first time in Griselda's life, takes her out of herself -- unfortunately with the inevitable result. And thats not just a saying They actually lost their heads In this wonderfully original fairy tale Isol takes on the dangers of narcissism
