1990-04-26 Today man's mind is under attack by all the leading schools of philosophy. We are told that we cannot trust our senses, that logic is arbitrary, that concepts have no basis in reality. Ayn Rand opposes that torrent of nihilism, and she provides the alternative in this eloquent presentation of the essential nature--and power--of man's conceptual faculty. She offers a startlingly original solution to the problem that brought about the collapse of modern philosophy: the problem of universals. This brilliantly argued, superbly

written work, together with an essay by philosophy professor Leonard Peikoff, is vital reading for all those who seek to discover that human beings can and should live by the guidance of reason. Ayn Rand opposes that torrent of nihilism and she provides the alternative in this eloquent presentation of the essential nature and power of mans conceptual faculty

2010-02-09 Five lectures George Soros recently delivered at the Central European University in Budapest - which he founded in 1991 - distill a lifetime of thinking on finance,

capitalism and open society In a series of lectures delivered at the Central European University in October 2009, George Soros provided a broad overview of his thoughts on economics and politics. The lectures are the culmination of a lifetime of practical and philosophical reflection. In the first and second lecture, Soros discusses his general theory of reflexivity and its application to financial markets, providing insight into the recent financial crisis. The third and fourth lectures examine the concept of open society, which has guided Soros' global philanthropy, as well as the potential for conflict between capitalism and open society. The closing lecture focuses on the way ahead, closely examining the increasingly important economic and political role that China will play in the future. The Budapest Lectures presents these five seminal talks into one volume, which offers a condensed and highly readable summary of Soros' world view. 2013-05-14 The Analytic Network Process (ANP), developed by Thomas Saaty in his work on multicriteria decision making, applies network structures with dependence and feedback to complex decision making. This new edition of Decision Making with the Analytic Network Process is a selection of the latest applications of ANP to economic, social and political decisions, and also to technological design. The ANP is a methodological tool that is helpful to organize knowledge and thinking, elicit judgments registered in both in memory and in feelings, quantify the judgments and derive priorities from them, and finally synthesize these diverse priorities into a single mathematically and logically justifiable overall outcome. In the process of deriving this outcome, the ANP also allows for the representation and synthesis of diverse opinions in the midst of discussion and

debate. The book focuses on the application of the ANP in three different areas: economics, the social sciences and the linking of measurement with human values. Economists can use the ANP for an alternate approach for dealing with economic problems than the usual mathematical models on which economics bases its quantitative thinking. For psychologists, sociologists and political scientists, the ANP offers the methodology they have sought for some time to quantify and derive

measurements for intangibles. Finally the book applies the ANP to provide people in the physical and engineering sciences with a quantitative method to link hard measurement to human values. In such a process, one is able to interpret the true meaning of measurements made on a uniform scale using a unit. This new edition of Decision Making with the Analytic Network Process is a selection of the latest applications of ANP to economic social and political decisions and also to technological design
